-  **Services:** Civil Engineering,
Landscape Architecture

JADE Consulting LLC and WAS Design worked closely with the City of Daphne to update and improve a strip of Scenic Highway 98. The half million dollar project obtained funding from combined sources, including the Transportation Alternative Grant from the National Highway Safety Administration. The improvements include updating and expanding the gravel parking lot and establishing a stepped natural drainage system that leads to D'Olive Creek. The parking lot update made it easier and safer to visit Gator alley; while the drainage system illustrates the City's treatment of storm-water and provides an educational opportunity. These improvements are done as part of a greater effort to update parts of Main Street and the City of Daphne.
